STARLINK IMPACT PLANS

Reliable connectivity solutions for schools, clinics & public facilities — with optional solar power and dedicated technical support

Provided & Supported by

SIG ICT Services

SATSOL

High-Quality Connectivity for SIG Facilities

Schools, clinics, and other public facilities can now access affordable, high-speed Starlink internet through Government-approved Impact Plans, provided exclusively by SATSOL and supported by the Solomon Islands Government ICT Services (SIG ICTS) within the Ministry of Finance and Treasury.

Purpose-Built for Mission-Critical Environments

Impact Plans have been developed specifically for public service operations where stable connectivity is essential and multiple users rely on the same connection. Unlike residential Starlink accounts, Impact Plans offer centralised billing, compliant security settings, and usage terms aligned with government and community service needs.

COMPLETE CONNECTIVITY PACKAGE

SATSOL offers a complete solution, including:

- A cost-effective selection of Starlink terminals
- Government-approved Starlink Impact Plans
- Compliance with SIG networking security requirements
- Solar power option for off-grid sites

IMPACT PLAN DATA ALLOWANCE

Impact Plans include **2TB of Priority Data** each month.

If monthly data usage exceeds 2TB, speeds will usually continue without rate limiting until 5TB of Priority Data is reached.
Use above 2TB should not be continuous or excessive.

PRICING

Hardware	
Starlink Standard Gen 3 Terminal	3,500 SBD
Starlink Enterprise v4 Terminal	3,500 SBD
Starlink Mini Terminal*	5,000 SBD

Services†	
Monthly Internet Subscription (Impact Plan)	499 SBD
Monthly Support and Maintenance	550 SBD
Installation (Rural / Provinces)	4,500 SBD + travel costs

† Prices include Sales Tax

* Starlink Mini uses up to three times less power than other terminals. Hardware prices are available exclusively with Impact Plans.

NETWORK SAFETY & SUSTAINABILITY

SIG ICTS supports public facilities in using Starlink's built-in security tools, including **malware protection**, to maintain safe and reliable connectivity.

In many remote areas, **on-site technical assistance** may not be immediately available. Appropriate support and maintenance arrangements are important to ensure the **long-term sustainability** of government connectivity services.

SATSOL offers a **dedicated support and maintenance service** that provides technical assistance, monitoring, and troubleshooting. This service is recommended for public facilities, particularly those outside Honiara.
